

For years implant dentists have used conventional round healing abutments, thereby creating a round gingival opening.

Introducing ScanCode

- ✓ Works with all implant systems
- ✓ Impression System - IOS and PVS
- ✓ All Metal Interface
- ✓ Anatomical healing abutment for implant location.
Six ideal emergence profiles.

For years implant dentists have used conventional round healing abutments, thereby creating a round gingival opening. ScanCode® by Pittman Dental Laboratory reshapes the gum by anatomically contouring the soft tissue during the healing process. It provides interproximal concavities against the bone or bone grafting material that can be placed after the ScanCode® has been completely seated and secured.
